

Polar Bears. We may have to tell them good-bye. The ice they live on and depend on to hunt their food is disappearing from under their big feet. Why? We're warming the earth by cutting forests and using coal, gas and oil.

Fish are disappearing from the sea—thanks to us catching too many of them and putting pollution into their water.

Birds and bees are in trouble—pesticides kill them, and they can't find food and places to nest because the forests, fields and marshes are gone.

Each of these creatures and millions more are a special part of our world and add beauty, wonder—and even food!—to our lives. Want to help them out?

- Use less paper (saves trees)
- Buy less stuff like bottled water and junk food (pollution and waste)
- Clean your plate (we throw away 300 million pounds of food every day in the USA). Plant a garden!
- Turn off lights and video games and save a ton of CO^2 pollution every year!
- Take shorter showers (saves energy and water, less global warming)
- Walk or bike rather than drive
- Help NCP plant trees around the world
- Visit a forest, stream or wilderness

You can help make a better world for all creatures—including us!
