

# SPECIES

- The world is losing **50-100 species** of plants and animals each day.
- **High profile endangered species** include polar bears, frogs, tigers, and elephants, but most disappearing species are insects and plants that occupy ecological niches.
- **99% of the large sharks** are gone from the North Atlantic, due to over-fishing (shark fin soup!)

**G**od made the wild animals of the earth of every kind, and the cattle of every kind, and everything that creeps upon the ground of every kind. And God saw that it was good.—Genesis 1:25, NRSV

# SPECIES

- The **main causes** of species loss are habitat destruction, over-harvesting, global warming, and pollution.
- Global warming alone could lead to the disappearance of **one-third of the world's species** this century!
- Chemical fertilizers and other pollutants **steal the oxygen** from bays and streams — the creatures suffocate!
- One pound of paper requires **3.5 pounds** of wood to produce.

# SPECIES

## What you can do:

- Use less wood and paper products.
- Eat more organic foods.
- Drive less and use less energy.
- Work to preserve the forests.
- Support NCP's *If a Tree Falls...* program of reforestation and forest preservation.
